

## Installing Fortinet SSL VPN Client

The following instructions a user has to follow to manually install the Fortinet SSL VPN client in windows.

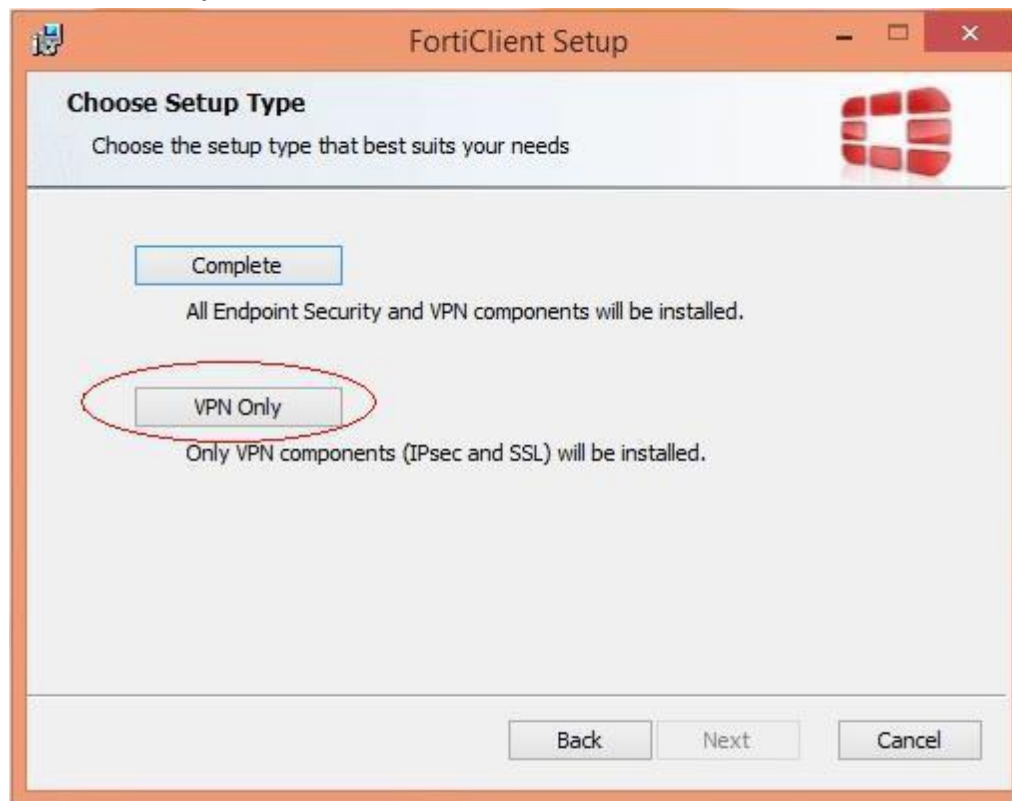

Link: <http://forticlient.com>

Once the file is downloaded, right click on the file, select **“run” (as a administrator or equivalent)** and proceed as follows:

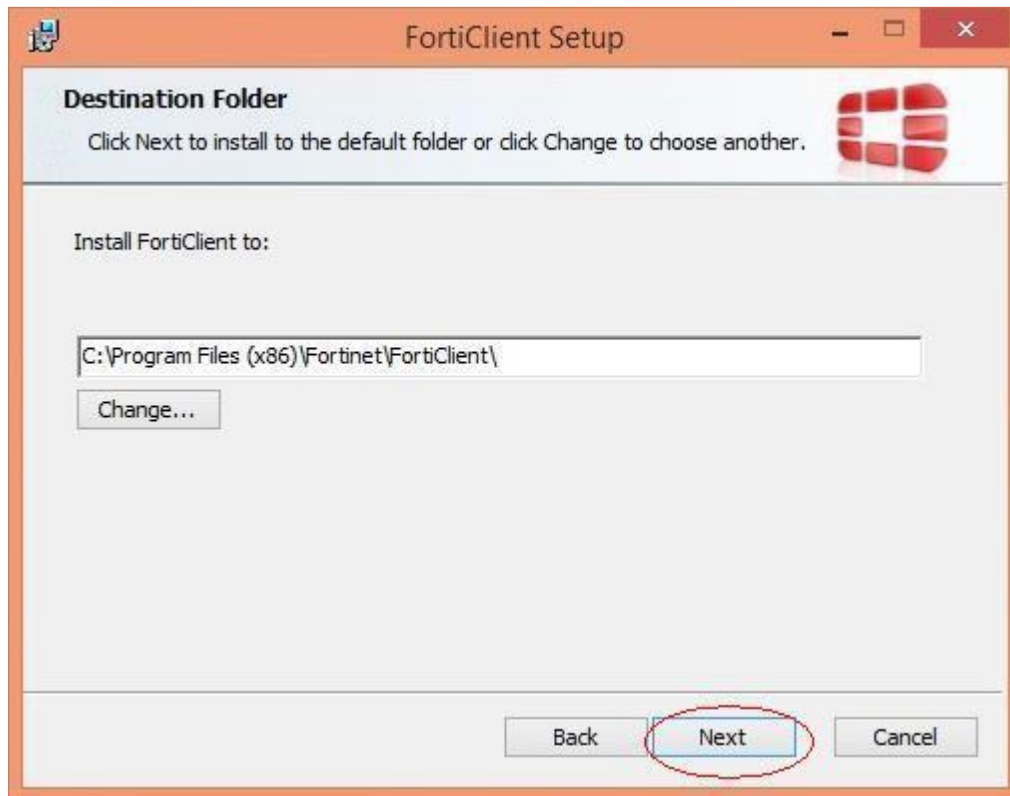

Click on **“Next”**

Select **"VPN Only"** and click on **"Next"**

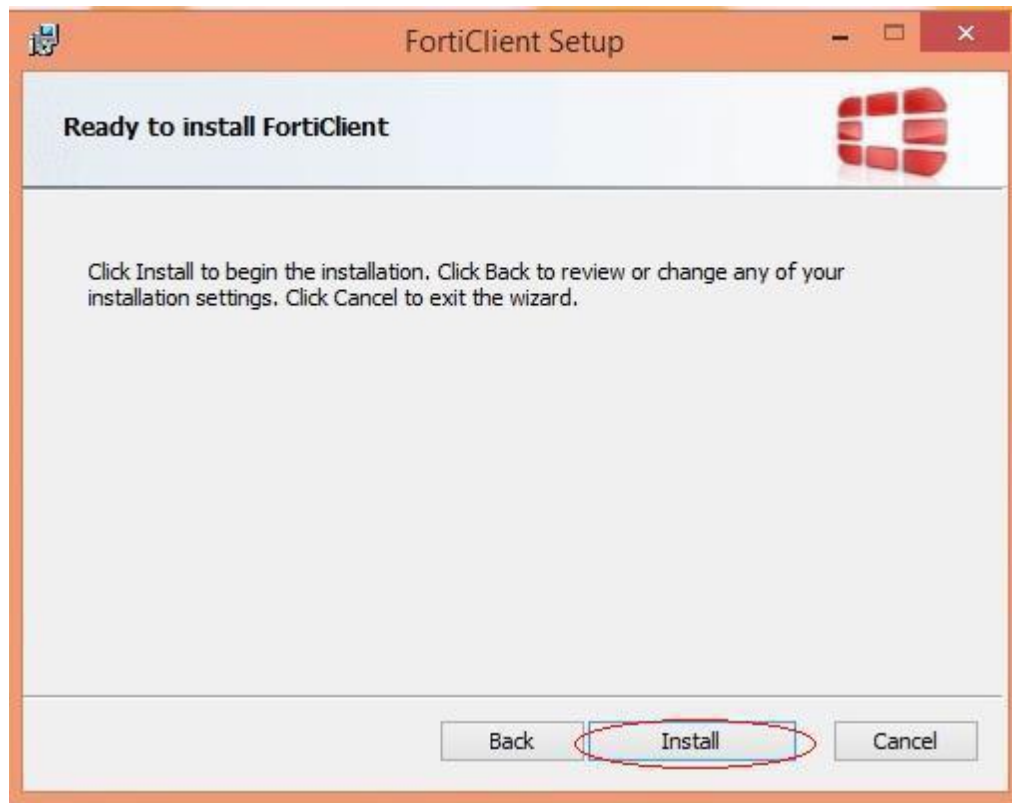

click on **"Next"**

Note : Click **"Next"** to install to the default folder or click **"Change"** to choose another folder

Click on **"Install"**

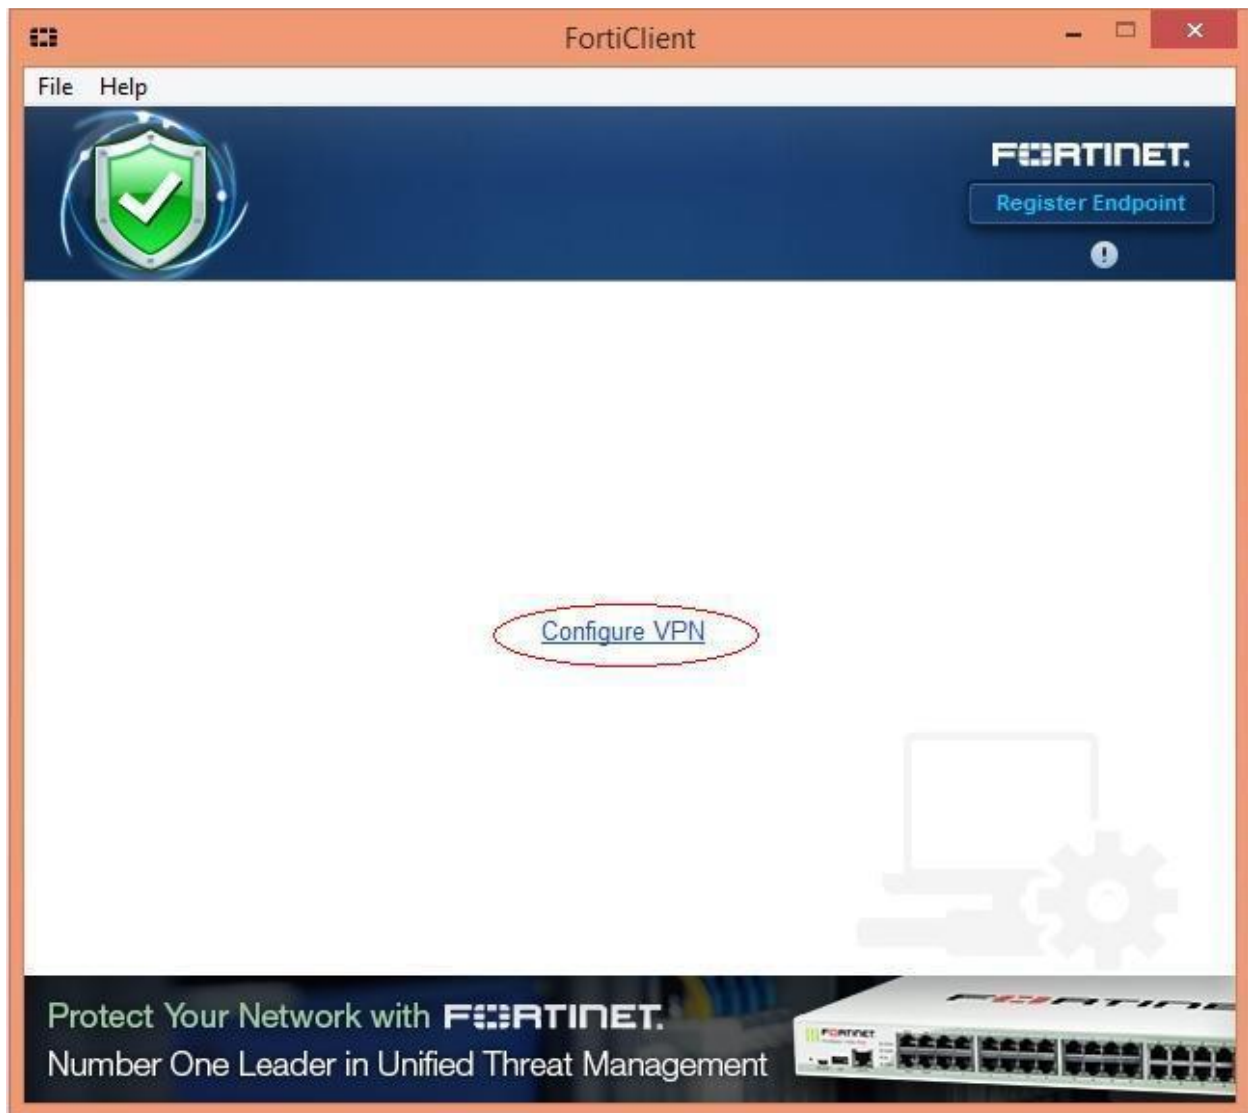

Installation is done and now click on **“Finish”**

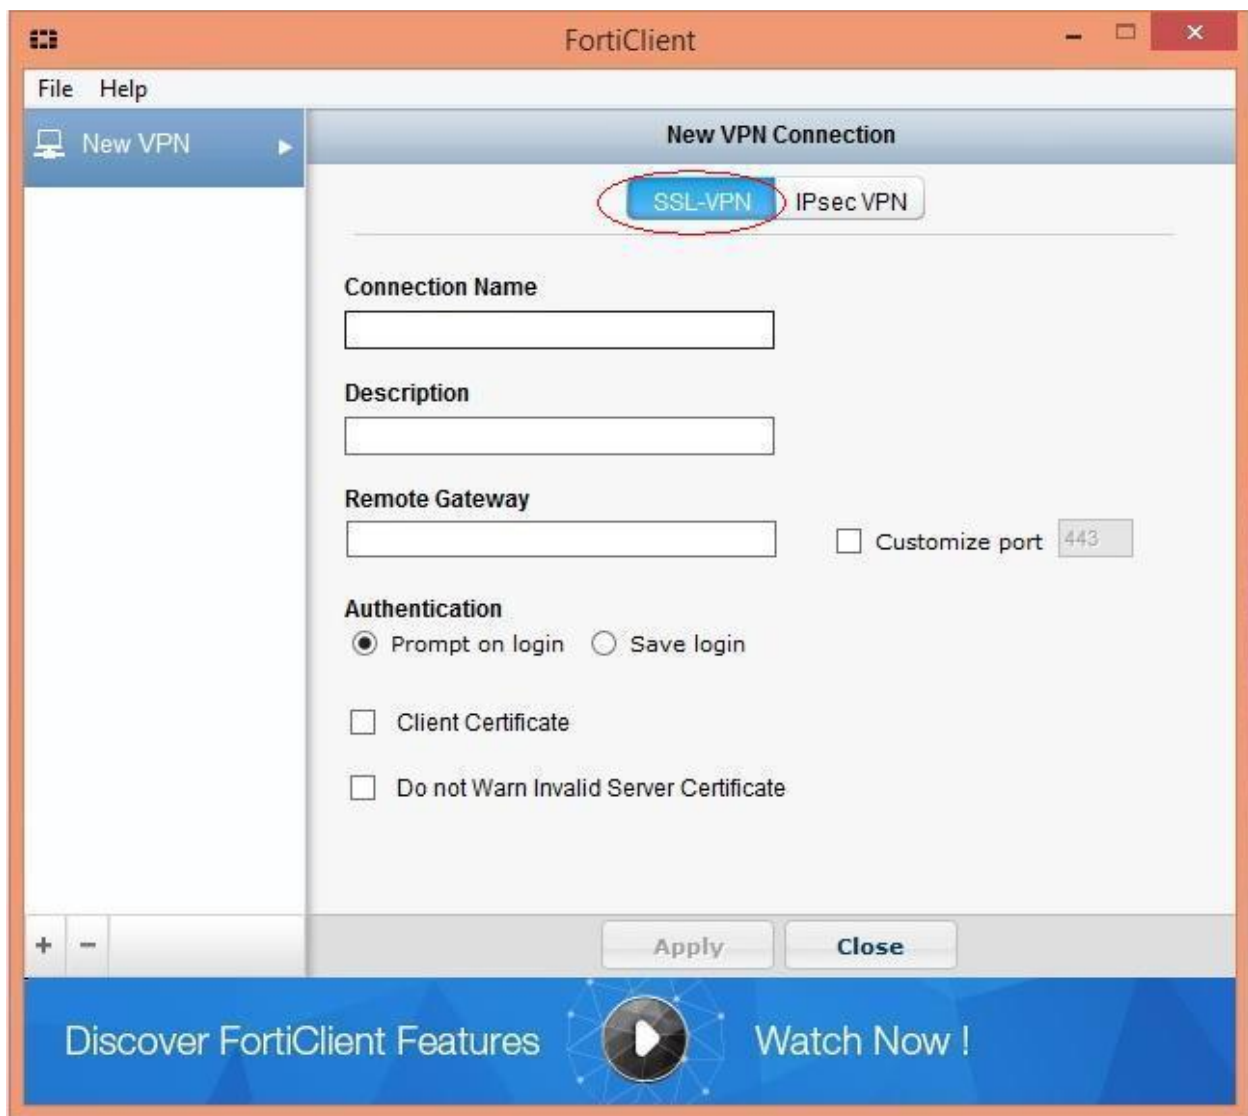

## Configuring Fortinet SSL VPN Client

The client is now installed and needs to be configured. To configure the client, click on Windows Start/All Programs/Forticlient/FortiClient SSL VPN and the following box opens. You are now ready to configure connection

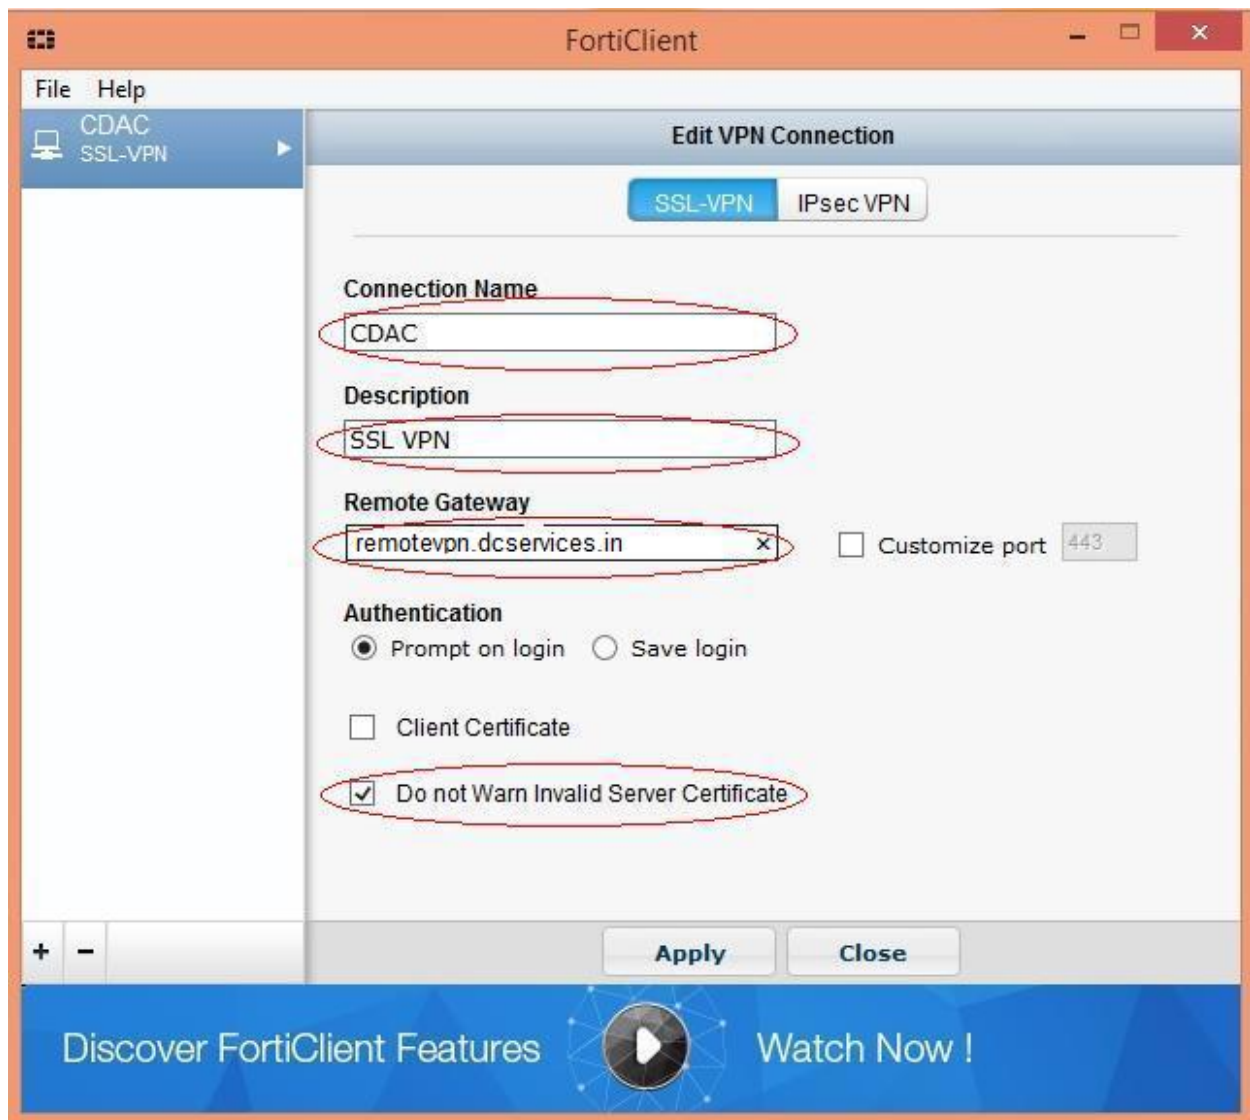

Click on **“Configure VPN”**

Click on “SSL-VPN”

“Connection Name (could be anything)” and “Remote Gateway (remotevpn.dcservices.in)” as below mentioned:

Enter your **user name (your employee ID)** and **password (mail password)** and click on **“Connect”**

Now your VPN is connected and you are part of C-DAC network.
